CIBMTR®
A RESEARCH COLLABORATION BETWEEN THE MEDICAL COLLEGE OF WISCONSIN AND NMDP

MEMORANDUM

Date: November 9th, 2026

To: Medical Directors and Primary Data Contacts

From: Jenni Bloomquist, Senior Manager, Data Operations

Subject: Reporting Requirements Change for HCT TED-Level Cases Beginning November 19

Purpose

Beginning with the November FormsNet release on Thursday, November 19, 2026 at 3pm CT, CIBMTR will reduce reporting requirements for TED-level cases once they reach six years of follow-up after transplant.

This change will reduce the ongoing reporting burden for transplant centers while maintaining collection of the long-term follow-up information most important to CIBMTR research.

What is Changing

Once a TED-level case reaches six years of follow-up after transplant, its reporting requirements will transition to the SelectTED level.

For these cases, centers will report only the following information:

- Survival status
- Subsequent transplants
- New malignancies/ subsequent neoplasms
- For allogeneic transplant recipients, the first disease relapse or progression for malignant diseases, or recurrence for non-malignant diseases

All other fields on the applicable follow-up forms will be disabled in FormsNet and will no longer require completion for these cases.

Why we are making this change

CIBMTR reviewed the long-term follow-up data collected for TED-level cases and determined that the data elements being discontinued are used substantially less often in research for this population.

CIBMTR has completed the necessary reviews and approvals to discontinue collection of these data elements after five years of follow-up have been reported. This approach reduces reporting burden while preserving the information needed to support important long-term outcomes research.

What transplant centers need to do

Beginning November 19:

1. Continue completing required follow-up forms according to their assigned due dates.

2. For eligible TED-level cases at or beyond six years after transplant, complete only the fields that remain enabled in FormsNet.

- If a recipient has already completed the 5-year reporting form, complete the next due follow-up form. Upon completion, the follow-up track will automatically update to SelectTED.
- The recipient's follow-up track will be displayed in the **Follow-up Track** column within the Events Grid on the recipient's Forms page.

3. Do not attempt to provide information for disabled fields. No additional center action is required for those fields.

4. Continue reporting disease relapse/progression or recurrence for eligible allogeneic transplant recipients when requested.

Important: Combined Follow-Up Cases

For recipients on combined follow-up with the latest HCT event on the TED track:

- Once the 5-year form is completed, the HCT follow-up track will automatically update to SelectTED.
- A Form 2450 will **not** be generated for future visits for these cases.
- Centers should complete only Form 4100.

FormsNet will automatically reflect the revised requirements by disabling fields that are no longer required.

What is not changing

This update does not eliminate long-term follow-up reporting for TED-level cases. Centers must continue to report the required SelectTED information:

- Survival status
- New malignancies / subsequent neoplasms
- Subsequent transplants
- For allogeneic transplant recipients, the first disease relapse or progression for malignant diseases, or recurrence for non-malignant diseases

Reporting requirements for TED-level cases that have not yet reached six years of follow-up remain unchanged.

Looking ahead

CIBMTR will continue to evaluate opportunities to reduce reporting burden while maintaining the data needed to support research and other program responsibilities.

Other reporting changes are currently in various stages of evaluation, readiness and approval. If additional requirements change, CIBMTR will communicate the specific details and effective dates separately.

Questions

For questions or assistance, please submit a request through **CIBMTR Center Support** using the appropriate category:

- General questions about this reporting change**:** Select **Forms Revision > Select TED**.
- Case-specific questions about how this change applies**:** Select **FormsNet3 Technical Request > FN3 Error in Form/Field Greyed Out**.

Thank you for your continued partnership and for the data you provide in support of transplant and cellular therapy research.
