Health Care Providers, have you ever wondered about the effects CAR T-cells may have on your patients' fertility?

Help us gather critical information to determine if CAR T-cells affect fertility by referring your patients to our survey.

The survey is conducted by The Leukemia & Lymphoma Society in partnership with Citizen Health, Moffitt Cancer Center, and University of Florida. Survey results will help us understand if CAR T-cells affect fertility and support informed strategies for future patients.

## Who can participate?

- Adults over the age of 18
- Received CAR T-cell therapy as a result of a blood cancer diagnosis
