Subject: Upcoming Changes to AOM Reconsent Expectations

To: US Transplant Center Medical Directors and Primary Data Contacts

From: CIBMTR Data Operations

Please review the following updates regarding Age of Majority reconsent processes for the CIBMTR Outcomes Database. We recognize that these changes may require additional effort and truly appreciate your center's ongoing commitment to maintaining ethical standards and data completeness in clinical research. Respect for patient autonomy and research integrity remains central to this process and to these updates.

Summary of Changes

- Beginning May 2027, queries will be placed for all active patients who have reached age 20 and do not have valid reconsent documentation dated after their 18th birthday. Active patients are defined as patients who are alive and not reported as Lost to Follow-Up in the CIBMTR Outcomes Database.
- This change will apply prospectively to patients turning 20 in 2027 and beyond.
- Patients who reached age 20 prior to January 2027 and have outstanding Age of Majority reconsent requirements will be managed under the same governance framework but will not be subject to system-generated queries or CPI impact related to Age of Majority reconsent, unless they are actively enrolled in a prospective research study.

What Remains Unchanged

- CPI query metric requirements will remain at >95% resolved by the end of the trimester.
- Centers will have until the end of the trimester following query placement, to update consent information and resolve any outstanding queries. Queries are used to prompt resolution and document follow-up effort and do not automatically restrict data use.
- Patients reported as Lost to Follow-up at the patient level are exempt from reconsent requirements. However, if active reporting resumes, centers will be expected to obtain reconsent at that time.

Recommended Actions

- Adapt your center workflows and consent processes to ensure that, whenever possible, reconsent is obtained after the patient turns 18 years old and prior to the next scheduled follow-up visit.
- If your center uses a local IRB, inform the IRB of this update and confirm their expectations for reconsent. Please email relevant local IRB documentation to databaseIRB@nmdp.org.

We understand the increased workload this change may represent. Our CIBMTR teams are available to meet with centers to develop a compliance strategy tailored to your specific needs. If your center would like support or guidance, please submit a ticket via CIBMTR Center Support > CPI/CTA to arrange a discussion.

Thank you for your ongoing dedication to upholding best practices in clinical research.
